

Hello

My name is Mathis Lebreton, I am in 1st year of GMP, and the purpose of this presentation is to introduce you to my hobby which is drawing. Yes, the activity for children.

First, I will tell you about drawing, what is it?

Then why I chose this hobby

To finish a small conclusion

1. What is drawing?

Drawing is an activity that we have been practicing since childhood to represent a landscape, a person (the little guys in battons). In general, to draw we use a paper, a pencil, and a little imagination but there is another way to draw such as drawing with paint, chalk, ink, or digital drawing that is practiced on computer.

2. I chose this hobby because I really like to draw even if I am not particularly good at drawing, it allows me to occupy myself and de-stress. Currently for example I am learning digital drawing with graphic tablet

3. To conclude it is a simple hobby that anyone can practice and that I am looking for a little to find in the design on SolidWorks.

Thank you for your attention

Do you have a question ?

No thanks
