The great Open Access manifestos of 2003

Budapest:

By 'open access' to this literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers.

The great Open Access manifestos of 2003

Bethesda:

The author(s) and copyright holder(s) grant(s) to all users a free, irrevocable, worldwide, perpetual right of access to, and a license to copy, use, distribute, transmit and display the work publicly and to make and distribute derivative works, in any digital medium for any responsible purpose, subject to proper attribution of authorship.

The great Open Access manifestos of 2003

Berlin:

Our mission of disseminating knowledge is only half complete if the information is not made widely and readily available to society. New possibilities of knowledge dissemination not only through the classical form but also and increasingly through the open access paradigm via the Internet have to be supported. We define open access as a comprehensive source of human knowledge and cultural heritage that has been approved by the scientific community.

WHAT'S HOT AND COOKING IN SCHOLARLY PUBLISHING

“OA is not the solution, partially because advocates can't agree on the problem to be solved, partially because **the economics of the OA solution shift financing but don't solve the basic economic problems of science publishing**, partially because OA seems far too disruptive for the purported benefits.”

– Kent Anderson, summarising Daniel Allington's essay
On open access, and why it's not the answer.

WHAT'S HOT AND COOKING IN SCHOLARLY PUBLISHING

“Scientific and technical publishing is a business.”
– Joe Esposito.

No. Publishing research is a *mission*.

A scholarly perspective

“We are committed to increasing access to the work produced at ASU **in order to benefit the public good**. Open Access is the best method for connecting the results of research and discovery to those who need it most, where it can have the most impact and provide the most benefit.”

– Anali Perry, Collections & Scholarly Communications Librarian, Arizona State University.

Idealism: a distraction?

Richard Poynder: What in your view is the single most important task that the OA movement should focus on today?

Joseph Esposito: **Getting rid of the idealists.** Let pragmatism abound!

<http://poynder.blogspot.co.uk/2013/07/joseph-esposito-on-state-of-open-access.html>

Open Access manifestos are about ideals

Budapest:

By 'open access' to this literature, we mean its free availability on the public internet, permitting any users to read, download, copy, distribute, print, search, or link to the full texts of these articles, crawl them for indexing, pass them as data to software, or use them for any other lawful purpose, without financial, legal, or technical barriers.

Open Access manifestos are about ideals

Bethesda:

The author(s) and copyright holder(s) grant(s) to all users a free, irrevocable, worldwide, perpetual right of access to, and a license to copy, use, distribute, transmit and display the work publicly and to make and distribute derivative works, in any digital medium for any responsible purpose, subject to proper attribution of authorship.

Open Access manifestos are about ideals

Berlin:

Our mission of disseminating knowledge is only half complete if the information is not made widely and readily available to society. New possibilities of knowledge dissemination not only through the classical form but also and increasingly through the open access paradigm via the Internet have to be supported.

We define open access as a comprehensive source of human knowledge and cultural heritage that has been approved by the scientific community.

Money (get away)

What does an average paper in a subscription journal cost?

According to *The STM Report* for 2012:

- Annual revenue of English-language journals is **\$9.1 billion**
- Total number of articles published is **1.8-1.9 million**

⇒ Average cost per article is **\$5081**
Or about £3365

Money (it's a gas)

What does an average open-access paper cost?

The Finch Report estimates are based on **£1500-£2000**

About 45-59% of £3365

Money (get away)

What does an average open-access paper cost?

The Finch Report estimates are based on **£1500-£2000**

About 45-59% of £3365

But more half of all open-access journals charge no APC

Of the remainder, the average APC is **\$906**

(Solomon and Björk 2012)

So true average is about **\$453**

Almost exactly £300

Money (get back)

Paper in subscription journal: \$5081

Paper in open-access journal: \$453

Subscription paper costs **eleven times as much**

WARNING: all figures are very approximate!

Money (it's a hit)

Paper in subscription journal: \$5081

Paper in open-access journal: \$453

Subscription paper costs even more than this much

WARNING: all figures are very approximate!

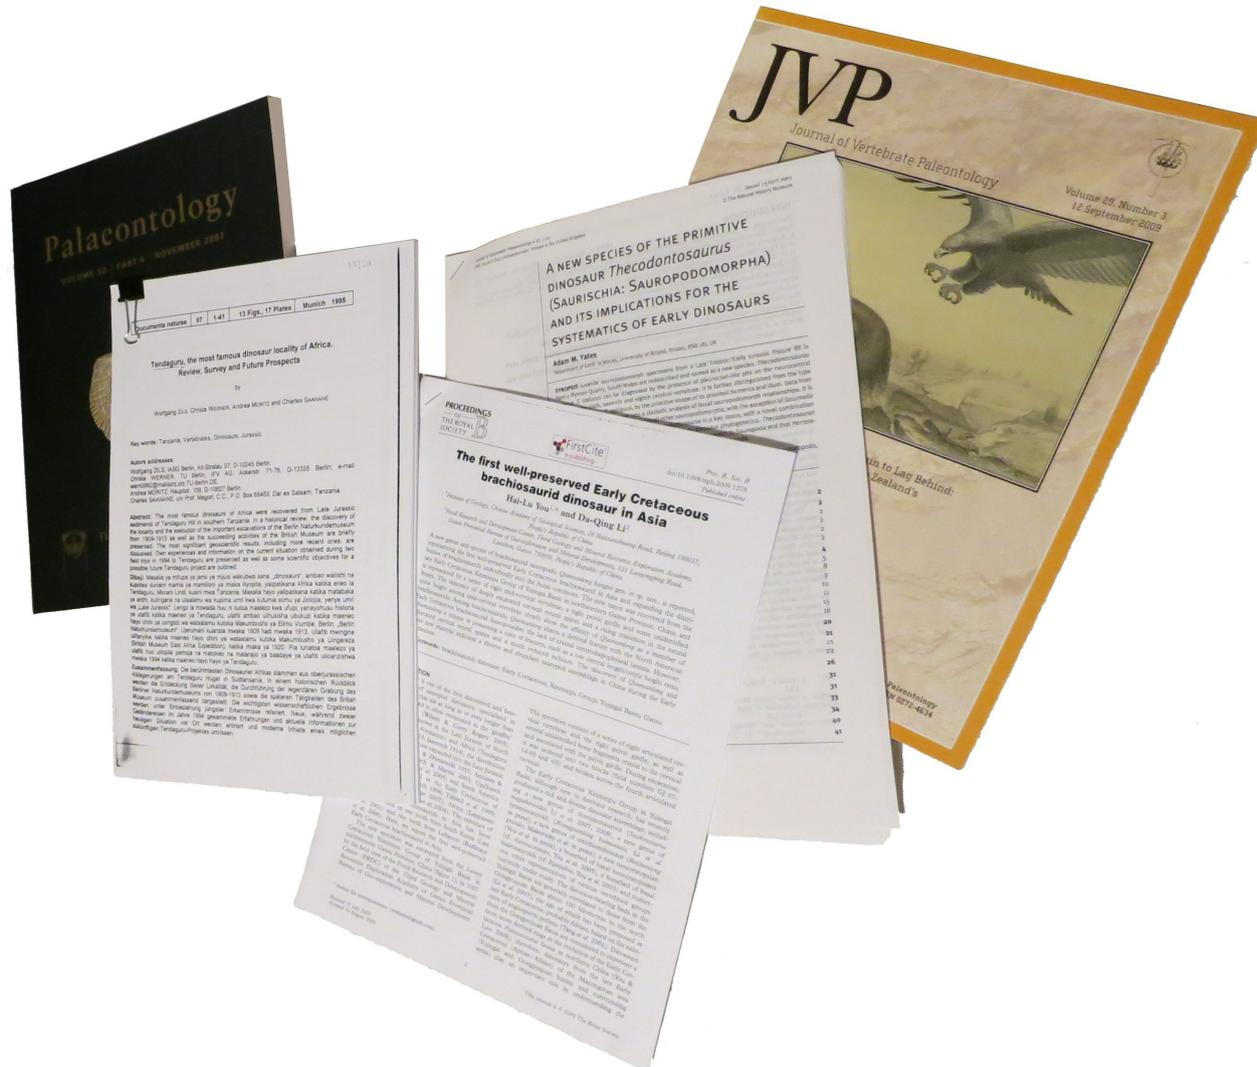

“Never send a capitalist to do an activist's job. The results will disappoint you every time.”

— Jean-Michel Smith.

I'm not worried

About the \$10 billion we waste on subscriptions every year

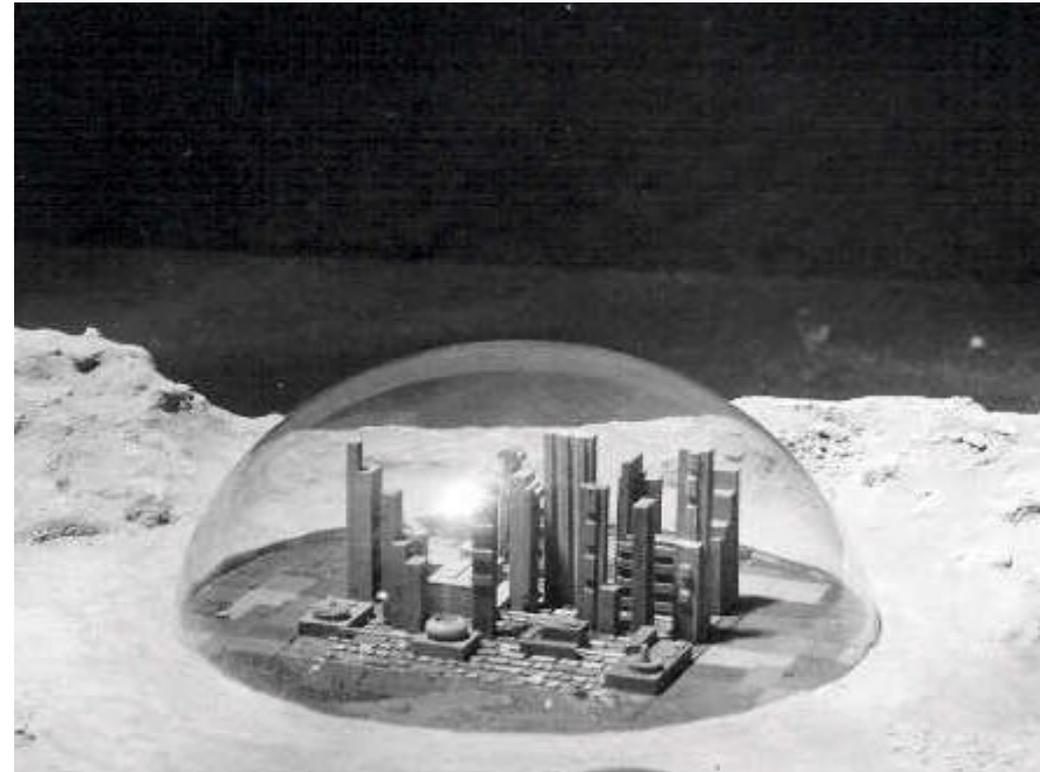

I am worried

About the \$100 billion we lose from wasted effort:
Scholars trying to find papers instead of doing research.

I *am* worried

About the \$1000 billion we lose from work that's never done.

I *am* worried

About the lives lost that could be saved by research already done.

“A malaria industry has ensued, involving an estimated 8,000-10,000 scientists around the world, their research fuelled by millions of dollars from funding bodies and the search for new and creative ways to end this menace.

There’s a further question to be asked: **is it morally and ethically acceptable to run a business based on withholding information from those most in need of it?”**

Who needs access? (whoneedsaccess.org)

Alistair Scott, knowledge manager for aid and international development

By Mike Taylor on 26/03/2012 | 3 Comments | [Edit](#)

The Institute of Development Studies (IDS), based in the UK, is a leading global charity for international development research, teaching and communications. Alistair Scott is an Information Systems Manager with its Mobilising Knowledge for Development (MK4D) programme.

Alistair explains what they do:

We work with partners in developing countries to build a bridge from research to policy and practice. We do this by delivering open access information products and services such as [Joto Afrika](#) – an East African briefing series on Climate Change Adaptation which was developed jointly between ourselves and the Kenyan organisation ALIN (Arid Lands Information Network).

BJ Nicholls, fossil preparator

By Mike Taylor on 13/03/2012 | Leave a Comment | Edit

In his professional life, BJ Nicholls is an advertising designer; but in his spare time he, along with his wife Lori, is a volunteer fossil preparator at the [Natural History Museum of Utah](#). What does that entail?

“

Most fossil discoveries require a tremendous amount of preparation work after a specimen is excavated. Fossils are typically brought back to preparation labs with little of the fossil exposed. We've been trained to remove the surrounding rock (called matrix) and to stabilize fossil bones that are often in very poor condition.

Christy Collins, mother and M-CM patient advocate

By Mike Taylor on 26/04/2012 | 3 Comments | Edit

What is M-CM?

M-CM stands for [macrocephaly-capillary malformation](#). It is a rare genetic syndrome first identified by researchers in 1997.

Could you tell us a little about [the M-CM Network](#) and how it was formed?

When my daughter, Signe, who is now 2 and a half years old, was diagnosed with M-CM, there was already a [strong patient support community online](#) facilitated by a family in England. The Internet and social networking largely solved the problem of connecting patients to each other without the need for a formal organization or fundraising. Because peer support was taken care of, our own organization was founded to accelerate research and make it easier to get clear, reliable information about M-CM.

Nick Barnes, Climate Code Foundation

By Mike Taylor on 17/02/2012 | 2 Comments | Edit

Nick Barnes's background is in the software industry, where he has twenty years' experience as a researcher, programmer, consultant, and manager. He is also the co-founder (with David Jones) of the [Climate Code Foundation](#), a non-profit organisation to promote the public understanding of climate science. The Foundation's "elevator pitch" is:

“Public trust in climate science has been undermined, and public support for policy changes eroded. We're rebuilding that trust and support, by improving the transparency and communication of the science, and especially the software used in the science.”

Niek Huizenga, young entrepreneur and IT specialist

By greboun on 15/05/2012 | Leave a Comment | Edit

Niek Huizenga is a Dutch entrepreneur, 30 years young, (almost) married and living in Groningen (the Netherlands). During his studies — BSc. in IT and MSc. in Business & Economics — he started several businesses. He divides his time between studying and working in the Netherlands and working in various African countries. We talked to him about his strategies for finding information, the usefulness of open access, and the difficulties that people in Africa experience finding the right information.

BJ Nicholls, fossil preparator

By Mike Taylor on 13/03/2012 | Leave a Comment | Edit

In his professional life, BJ Nicholls is an advertising manager; but in his spare time he, along with his wife, is a volunteer fossil preparator at the [Natural History Museum of Utah](#). What does that entail?

Christy Collins, mother and M-CM patient advocate

By Mike Taylor on 26/04/2012 | 3 Comments | Edit

What is M-CM?

M-CM stands for [macrocephaly-capillary malformation](#). It is a rare genetic syndrome first identified by researchers in 1997.

Could you tell us a little about [the M-CM Network](#) and how it was formed?

Kelly Trout, nurse and independent researcher

By Mike Taylor on 25/02/2012 | 2 Comments | Edit

Kelly Trout is a registered nurse by profession. She is also a leader of a small nonprofit organisation called the [International WAGR Syndrome Association](#), and the parent of an adult with [WAGR/11p Deletion syndrome](#). This is an extremely rare disorder — fewer than 500 cases have been identified worldwide. The primary features are Wilms tumor (a type of kidney cancer), Aniridia (absence of the iris), Genitourinary tract abnormalities, and intellectual disability.

4. Open Access is about unity (2)

FASTR bill (Fair Access to Science and Technology Research)

Association of College and Research Libraries (ACRL):

“ACRL joined other national and regional library, publishing, research and advocacy organizations in a letter thanking members of Congress who introduced the bill.”

Association of American Publishers (AAP):

“Different Name, Same Boondoggle [...] unnecessary and a waste of federal resources [...] would add significant, unspecified, ongoing costs [...] squander federal employees’ time with busywork.”

4. Open Access is about unity (2)

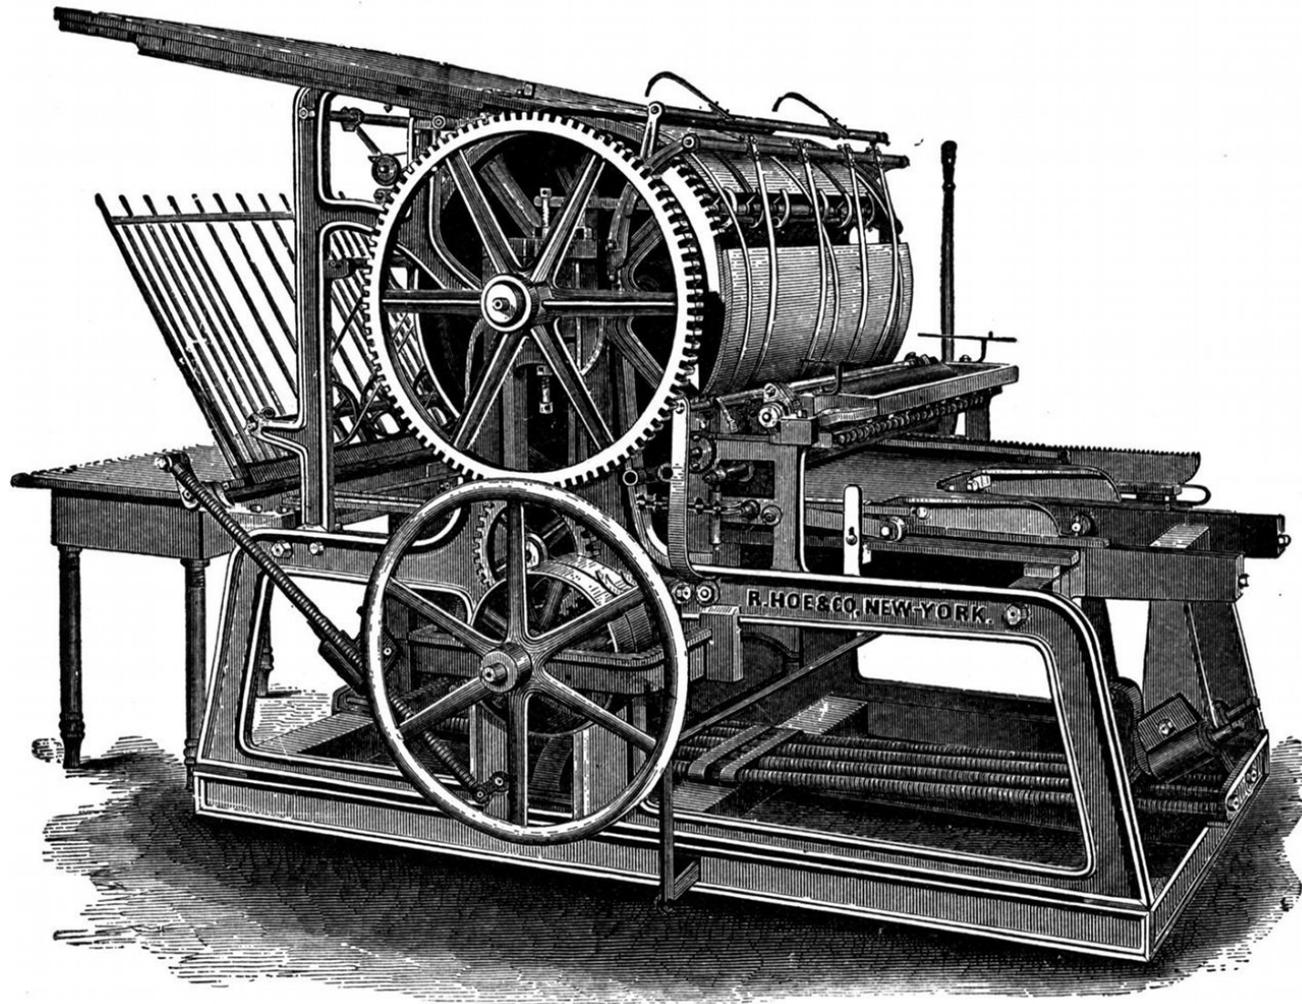

4. Open Access is about unity (2)

We need a radical realignment of publishers.

5. Open Access is about accepting reality

Distribution was cheap in the 20th Century.

5. Open Access is about accepting reality

Distribution is **free** in the 21st Century.

5. Open Access is about accepting reality

Distribution is free in the 21st Century.

“Like all developments of new communication networks, SMS, fixed telephones, the telegraph, the railways, and writing itself, the internet doesn’t just change *how well* we can do things, it qualitatively changes *what* we can do.”

“At network scale the system *ensures* that resources get used in unexpected ways. **At scale you can have serendipity by design, not by blind luck.**”

– Cameron Neylon.

Don't get too distracted by Gold vs. Green

Remember the mission

We're not groping towards cost savings.

Remember the mission

We're not groping towards cost savings.

We're transforming what research is and how it's used.

The cost to worry about is opportunity cost.

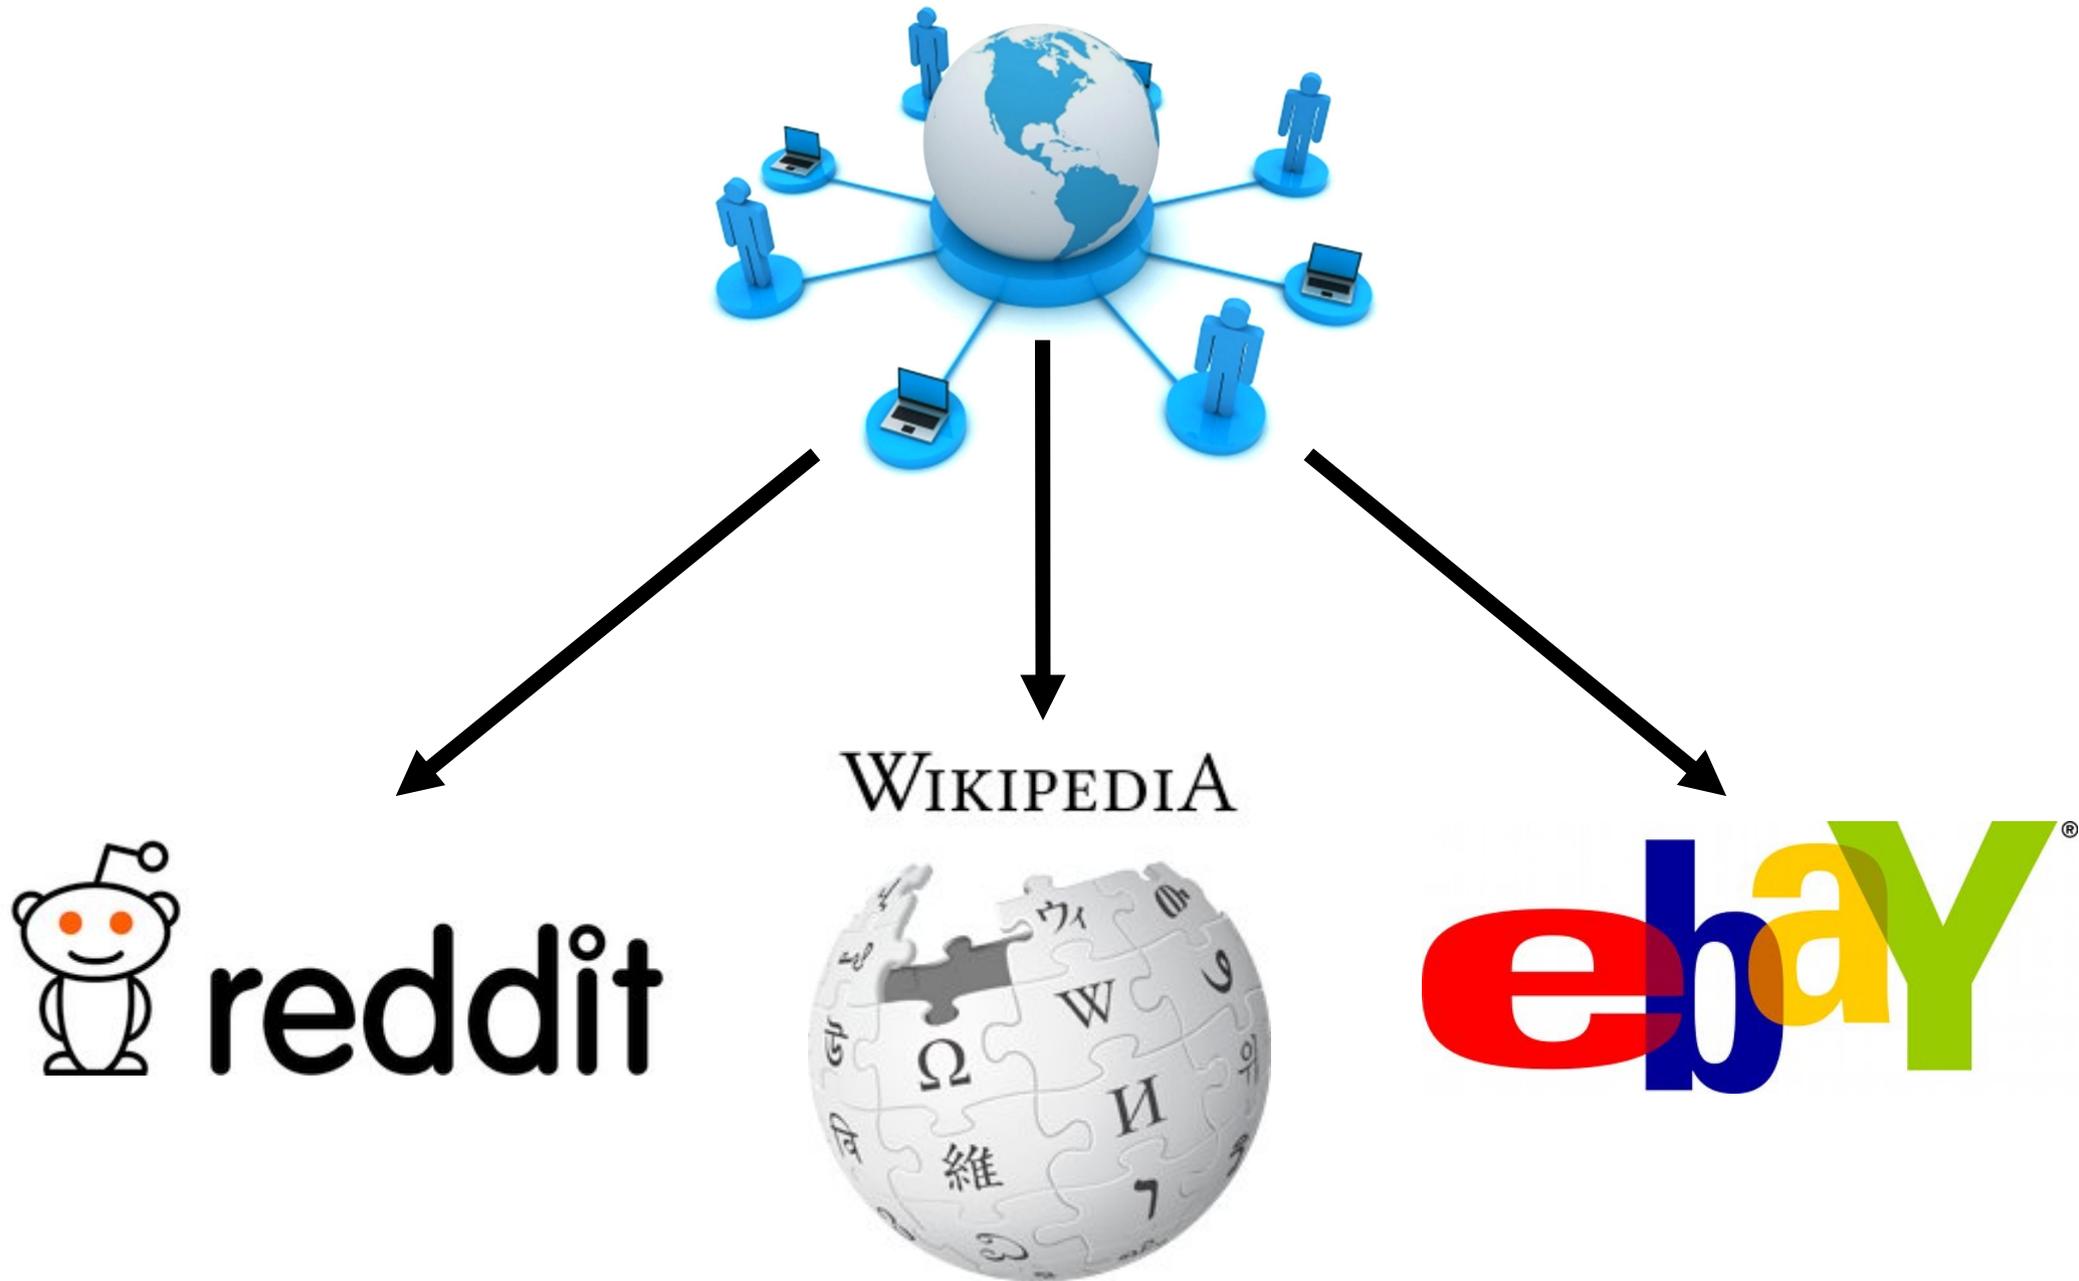

Open access is only part of the puzzle

Network Enabled Research: Maximise scale and connectivity, minimise friction – Cameron Neylon.

“A piece of Network Ready Research will be modular and easily discoverable [...] **Not just copyable or pasteable but easily shared through multiple systems while carrying with it all the context required to make use of it, all the connections that will allow a user to dive deeper into its component parts.**”

People will build things we haven't imagined

WHAT'S HOT AND COOKING IN SCHOLARLY PUBLISHING

“OA is not the solution, partially because advocates can't agree on the problem to be solved, partially because the economics of the OA solution shift financing but don't solve the basic economic problems of science publishing, partially because **OA seems far too disruptive for the purported benefits.**”

– Kent Anderson, summarising Daniel Allington's essay
On open access, and why it's not the answer.

Disruption is not a bug, it's a feature

Open Access is about sharing, unity and sanity, not about money.
